Dear Reader:

Hello! My name is Hso Hser I am a student at Como Park Elementary. I am in 6th grade we are learning about global warming which I think causes more diseases. Diseases cause people to be sick or die.

Other people think Global warming is natural. Scientist thinks that the sun heats the world not people. Other scientist thinks that Global warming is a natural thing that happens every 1500 years. I believe that people have made global warming worse over the years. The sun's rays are shine onto earth, which makes earth warming. If things don't change, too many diseases will spread over the world and more people will die.

I believe that global warming is caused by people, which hurts every one. Even rodents and other mammals may be hurt by climate change. With warmer temperatures, rodents and mammals get more diseases, and they spread it to humans. Also, in warmer places, more mosquitoes live. Mosquitoes spread Malaria, and so places like Asia and Africa would have many diseases because they're warm already and Global Warming would make them warmer. The people that live in places will die more than other places.

People need to change Global warming because the earth is to dirty. That's why mosquitoes are making diseases spread. Because if your house is dirty like dirty with garbage and dirty dish water mosquitoes will lay more eggs to cause more infection to spread of diseases.

Thank you for reading about my opinion of Global Warming. I hope to receive an answer soon.

Sincerely,

Hso Hser
