Dear Reader:

Greetings! My name is Ceeb (Jeng). I am a student at Como Park Elementary School. I am a 6th grader there. What I'm doing right now is learning about global warming. I am writing this letter because I think that Global Warming is man-made. I think the issue of global warming is can be talked about and changed.

Other people think that Global warming is natural. Some scientists think there is an approximate 1500-year cycle. Other researchers believe the sun is responsible of heat on the Earth that it haves problems from that heat. I believe that people are making Global Warming worst. My prediction is if Global Warming gets worst then the world gets worst.

I think that if we don't stop people from making Global Warming worst then that planet will never get worst. Observing wildlife could tell us a lot how global warming affects living creatures. An "early warning system" based on an international wildlife Monitoring network may be the only effective defense. Large groups of people are getting sick because of global warming.

We have to save energy to save electricity. I think turning off the lights when you leave a room to save electricity. I think we need to turn off our electricity when we are not home or not using it. I think that when a lot of people use electricity they are just wasting electricity bills.

I thank you for reading my letter to you about Global Warming. I give a big thanks to you guys at Pioneer Press. I expect to hear from you soon!

Sincerely,

Ceeb (Jeng)
