Dear Reader:

Hello! My name is Phuc. Call me Kelvin if you can't pronounce my name. I'm a student at Como Park Elementary School. I'm in 6th grade and I'm writing this persuasive letter because I want people to change so then Global Warming would get less powerful. Because Global warming is making the world heat up, which is spreading diseases like malaria. If you listen to me then you could help save lives!

Some people in my class say that Global warming is natural. They also say that there is a 1500-year cycle. Even some scientists say that too. Because of global warming a new thing has happen. A thing called global dimming. It is causing a decrease on the sun's heat and the power of evaporation by 10%. Also when we pollute the air, the air born particles go in to the clouds and mix with the water and create a giant mirror in the clouds. It is also making the world 9% colder. I believe that we caused global warming and we should make it less effective.

I believe that if we don't change our actions then something horrible will happen to us all. Because malaria (a Anopheles mosquito spreading disease) is all ready killing 600 million people per year. There are also 9 other dangerous kinds of disease, including avian influenza a bird disease, and tuberculosis caused by un-pasteurized milk. How disease is being spread is that mosquitoes live and travel to hot places. Global warming is making the earth hot so the mosquitoes travel to that new hot place and start feeding and start spreading their diseases. If all the mosquitoes travel all around the world then we will be in big trouble.

I believe that if we don't change the things we do on a daily basis then it could be the end of the world. Like if you watch 5 hours of TV than you could cut it down to 2 hours. Or if you are playing a lot of games and computer rather than playing with your friend's in a game of tag or something then you need to get your brain check. Because when we use electricity we cause power plants to use more heat and pollution. We need to use less electricity because it causes heat, which gets trapped in the atmosphere, and warms the world up. I think that we should rid bikes or walk instead of using a car. Or us renewable energy. Even buy products with energy star label. So listen to my advice and start to help the earth.

Thanks for reading this letter. I hope you will answer me. I will be expecting an answer from you.

Sincerely,
Phuc
